Mrs. Vinita Mishra, Mrs. Dimple Bohra

## **CERTIFICATE OF APPROVAL OF COURSE PROJECT**

THIS IS TO CERTIFY THAT

**SAYLI SAWANT, AMEY SONJE, YOGESH TEMBE** OF THIRD YEAR “ELECTRONICS ENGINEERING” STUDYING UNDER THE UNIVERSITY OF MUMBAI HAS SATISFACTORILY PRESENTED THE PROJECT ON “**Application To Search Faculty**” AS A PART OF THE COURSE WORK OF **COURSE PROJECT** FOR SEMESTER V IN THE ACADEMIC YEAR OF 2019-20.

DATE :

INTERNAL  
EXAMINER

## **Outline :**

Sr. No.	Content	Page No.
1.	Introduction	04
2.	Problem Statement	04
3.	Software Requirements	04
4.	Implementation	06
5.	Results	10
6.	Conclusion	14

## **Introduction :**

We aim by the topic of ‘Search Faculty’ to simplify the process of searching faculty in colleges and ease the process whilst saving time. We aim to inculcate this project as an android and web application for students studying at colleges.

## **Problem Statement :**

- Many problems are faced by students while finding faculties around the Campus.
- Students find it difficult to locate cabins of faculties and hence it wastes their time.
- During submissions and important work related queries students had to find faculties all over the campus.

## **Software Specifications :**

Netbeans IDE :-

Netbeans IDE can be used to create a user interface using java.

HTML :-

It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript which can be used for designing web applications.

## CSS

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language like HTML.

## Javascript :-

JavaScript ,often abbreviated as JS, is a high-level, interpreted scripting language that conforms to the ECMAScript specification. JavaScript has curly-bracket syntax, dynamic typing, prototype-based object-orientation, and first-class functions.

## PHP :-

PHP: Hypertext Preprocessor (or simply PHP) is a general-purpose programming language originally designed for web development.

## PhpMyAdmin:-

**phpMyAdmin** is a free and open source administration tool for MySQL and MariaDB. As a portable web application written primarily in PHP, it has become one of the most popular MySQL administration tools, especially for web hosting services.

## WAMP Server :-

**WampServer** refers to a software stack for the Microsoft Windows operating system, created by Romain Bourdon and consisting of the Apache web server, OpenSSL for SSL support, MySQL database and PHP programming language.

## **Implementation :**

**Code for connectivity between database and login page :**

```
<?php
```

```
session_start();
$username = filter_input(INPUT_POST, 'username');
$password = filter_input(INPUT_POST, 'password');
$account = filter_input(INPUT_POST, 'account');
    $_SESSION['username']=$username;
    $_SESSION['password']=$password;

if (isset($username)){
    if(isset($password)){
        $db=mysqli_connect("localhost","root","Panda@19","project")
        $sql="SELECT * FROM `login` WHERE username='$username'
AND password='$password' AND account='$account'";

        $query=mysqli_query($db,$sql);
        $result=mysqli_num_rows($query);

        if($result){
            if($account=='faculty'){
                include 'facultypage.php';
            }
            else
            {
                include 'studentpage.php' ;
            }
        }
    }
}
```

```

        }
        else{
            echo "Invalid Entry";
        }

    }
    else{
        echo "password should not be empty";
        die();
    }
}
else{
    echo "username should not be empty";
    die();
}
mysqli_close($db);

?>

```

### **Code For Connectivity between database and user interface :**

```
<?php
```

```

if($_SERVER['REQUEST_METHOD']=="POST"
isset($_POST['find']))
{

```

and

```

    func();
}
{

$faculty_number=filter_input(INPUT_POST, 'faculty_number');
$day = filter_input(INPUT_POST, 'day');
$slot = filter_input(INPUT_POST, 'slot');
$hour = filter_input(INPUT_POST, 'hour');
$Room_Number = filter_input(INPUT_POST, 'Room_Number');

$con=mysqli_connect("localhost","root","Panda@19","project");
// Check connection
if (mysqli_connect_errno())
{
    echo "Failed to connect to MySQL: " . mysqli_connect_error();
}

$sql2="SELECT ` $hour ` FROM `facultytimetable` WHERE `faculty
number`='$faculty_number' AND `slot`='$slot' AND `day`='$day'";

if ($result2=mysqli_query($con,$sql2))
{
    // Fetch one and one row
    while ($row2=mysqli_fetch_row($result2))
    {
        ?>

```

```
<script type="text/javascript">
    alert("Room Number:<?php echo $row2[0]?>");
</script>
<?php

    }
    // Free result set
    mysqli_free_result($result2);
}
if(!$result2){
    ?>

    <script type="text/javascript">
        alert("Invalid Entry!!");
    </script>
    <?php
}

}

?>
```

## Faculty Search Page (For Students):

## Conclusion :

- So this web applications is easy to access and will help fresher students to solve the problems faced by them.
- Each and every student will be updated about competitions, events and scholarships. So none of the student will miss any of the important update.
- e-Attendance system will help faculty by reducing their efforts to handle attendance sheets of all of their lectures.
- Students can keep track of their attendance so that if they are less in attendance in some subjects they can improve it.
- This web application mostly provides all the features in one place and makes all the features easy to access and thus saving the time to access each of these features through different applications.
- This web application saves the space required in mobile phones to keep different apps for different purposes.
